

# Mantax Black

## State of the Art Mechanical Caliper!

The Mantax Black calipers have an extra durable measuring scale printed clearly on both sides with optional configurations. With patented foldable jaws and accessories such as the green Gator Eyes laser pointers, the Mantax Black is an excellent choice for economic, fast and easy diameter measuring.

Non-wear scale print on both sides of the scale with several different graduation options and special printing for Gator Eyes Laser Pointers available in selected models. Non-reflecting surface improves scale readability.

*Great advantages with foldable jaws when transporting and storing the Mantax Black.*

- Patented technology for foldable jaws only with Haglöf Sweden Calipers
- Comfortable handle for all hand sizes
- Approved and tested by independent institutes

## Mantax Black and Gator Eyes

Aim the two perfectly aligned laser pointers as if you were actually at the stem – just pull the caliper jaws apart until the laser points are positioned where you need them to be. Read the diameter results on laser scale if available on your caliper. One inch or 2.54 cm must be added to the regular diameter scale result. If you are using Gator Eyes on a digital caliper from Haglöf (Mantax Digitech®; Digitech® Professional), results can be registered with the press of a button. For more details, see this catalog.

### Mantax Black
